From the user testing, I received valuable and very interesting feedback that will help my application be more interactive and not-confusing to the user. Because I didn't have the main feature of my application - the physical drawing - working, most of the feedback was including a tutorial in the beginning to make it easier to understand, and including information about the character itself so the user can learn about the Chinese language. The feedback that I received that I thought was the most useful was from Megan. She suggested to include a stroke-by-stroke tutorial so a user who has never experience writing the Chinese language would know how to write the character.

FEEDBACK FROM
Megan
- tutorial video
- showing the stroke
order (numbered)
- animation
- self-explanatory

[Megan]
- how much time
was interactive
- if there only one
character
- length the video
- familiar with
the Chinese main
idea
- the way you had
an idea to a lot
- how the character
is in
a video, like the
video

- more clear instructions
- how to know
the stroke order
is especially for traditional
- need to understand the
- writing up
by using the character
- help about character
is helpful in understanding
the character
